

1. Introduction

Nazareth Catholic Primary School is a school which operates with the consent of the Catholic Archbishop of Melbourne and is owned, operated and governed by Melbourne Archdiocese Catholic Schools Ltd (MACS).

2. Purpose

This procedure ensures that, as far as practicable, a safe and supportive environment is provided where students at risk of anaphylaxis are provided with reasonable adjustments to participate in school programs and activities in compliance with Ministerial Order 706.

3. Scope

This procedure applies at Nazareth Catholic Primary School.

This procedure applies to:

- staff, including volunteers and casual relief staff.
- all students who have been diagnosed with a medical condition that relates to allergy and the potential for anaphylactic reaction, where the school has been notified of that diagnosis, or who may require emergency treatment for anaphylactic reaction.
- the Parent (a person who has parental responsibility for a child, including a biological parent or another person who has been granted parental responsibility by a court order. The term is also used to refer to carers where permanent care, foster care or kinship arrangements are in place) of students who have been diagnosed as at risk of anaphylaxis or who may require emergency treatment for anaphylactic reaction.

4. Communication with Parents

- 4.1. The Principal engages with the Parent of students who are at risk of anaphylaxis to develop risk minimisation strategies and management strategies. The Principal will also take reasonable steps to ensure each staff member has adequate knowledge of allergies, anaphylaxis, and the school's expectations in responding to anaphylactic reaction.
- 4.2. The Principal requires that the Parent provides up to date medical information and an updated Individual Action Plan ([ASCI Action Plan for Anaphylaxis](#)) signed by the treating medical practitioner together with:
 - a recent photo of their child and
 - any medications and auto-injectors referenced in the plan and recommended for administration.
- 4.3. The Parent is requested to provide this information:
 - annually
 - prior to camps and excursions
 - if the child has an anaphylaxis reaction at school, and
 - if the child's medical condition changes since the information was provided.

- 4.4. The Principal's nominee is to engage with the Parent where updated documentation or medication is required in line with the school's communication plan.
- 4.5. Please note the [ASCIA Travel Plan for People at Risk of Anaphylaxis](#) requires completion by a registered medical practitioner for domestic or overseas travel.

5. Individual anaphylaxis management plans (IAMP)

- 5.1. The Principal is responsible for ensuring that all students who have been diagnosed by a medical practitioner as having a medical condition that relates to allergies and the potential for anaphylactic reaction have an Individual Anaphylaxis Management Plan (IAMP) developed in consultation with the student's Parent.
- 5.2. The school requires the IAMP to be in place as soon as practicable after the student is enrolled and where possible before their first day of school. If for any reason training and a briefing has not yet occurred, an interim management plan, developed in consultation with the Parent, will be put into place for a student who is diagnosed with a medical condition that relates to allergy and the potential for anaphylactic reaction, and training must occur as soon as possible thereafter. The IAMP will comply with Ministerial Order 706 and record:
 - student allergies
 - locally relevant risk minimisation and prevention strategies
 - names of people responsible for implementing risk minimisation and prevention strategies
 - storage of medication
 - student emergency contact details
 - student ASCIA Action Plans.
- 5.3. The student's IAMP will be reviewed by the Principal or nominated staff member, in consultation with the student's Parent, in all the following circumstances:
 - annually
 - if the student's medical condition changes as it relates to allergy and the potential for anaphylactic reaction.
 - as soon as practicable after the student has an anaphylactic reaction at school.
 - when the student is to participate in an off-site activity, such as camps and excursions, or at special events conducted, organised or attended by the school (e.g. class parties, elective subjects, cultural days, fetes, incursions).

Refer to the [Individual Anaphylaxis Management Plan Template](#).

Refer to the Supporting documents section for the ASCIA Action Plan for Anaphylaxis to apply for each student diagnosed by a medical practitioner as having a medical condition that relates to allergy and the potential for anaphylactic reaction

6. Location of Individual Anaphylaxis Management Plans and ASCIA Action Plans

- 6.1. The office manager maintains an up-to-date register of students at risk of anaphylactic reaction as nominated by the Principal.
- 6.2. The Principal communicates to staff the details of the location of student Individual Anaphylaxis Management Plans and ASCIA Action Plans within the school, during excursions, camps and special events conducted, organised or attended by the school. Please note the [ASCIA Travel Plan for People at Risk of Anaphylaxis](#) requires completion by a registered medical practitioner for domestic or overseas travel.

- Individual Anaphylaxis Management Plans, ASCIA Action Plans and autoinjectors will be stored in the First Aid room. Students EpiPens along with additional spare EpiPens for general use are located in the first aid bags that are in each classroom.
- For camps, excursions and special activities, the staff member responsible for the activity is responsible for reviewing the medical management plans as a part of the planning and risk assessment prior to the activity being approved. A first aid supplies audit will be conducted to see if camp appropriate materials are packed. First Aid packs are checked by the first aid officer. Outings must have at least 2 x Level 2 qualified first aid trained adults attending. The day before the activity, the staff member in charge of the activity will again review the medical management plans and prepare and collect any medication required and prepare the first aid kits. Spare EpiPens are carried in the first aid bags for all activities, camps and excursions.
- The school will request that parents provide up-to-date and accurate medical information relating to students, including information about conditions such as anaphylaxis, asthma and diabetes. Parents will be requested to provide this information annually, prior to camps and excursions and if the child's medical condition has changed.

Refer to [Off-site Risk Management Checklist for Schools](#).

7. Risk minimisation and prevention strategies

Refer to [Risk Minimisation Strategies for MACS schools](#).

The Principal ensures that risk minimisation and prevention strategies are in place for all relevant in-school and out-of-school settings which include (but are not limited to) the following:

- during classroom activities (including class rotations, specialist and elective classes)
- between classes and other breaks
- in canteens
- during recess and lunchtimes
- before and after school where supervision is provided (excluding OSHC)
- special events including incursions, sports, cultural days, fetes or class parties, excursions and camps.

Our school does not ban certain types of foods (e.g., nuts) as it is not practicable to do so and is not a strategy recommended by the Department of Education (DE) or the Royal Children's Hospital as it can create complacency amongst staff and students, and it cannot eliminate the presence of all allergens.

However, the school avoids the use of nut-based products in all school activities, requests that the Parent does not send those items to school if possible and the school reinforces the rules about not sharing and not eating foods provided from home.

The Principal or delegate regularly reviews the risk minimisation strategies outlined in Anaphylaxis Risk Minimisation strategies for our schools considering information provided by the Parent related to the risk of anaphylaxis. Refer to [Anaphylaxis Risk Minimisation strategies for our school](#).

The Principal is responsible for annually completing the Annual Risk Management Checklist for Schools to ensure that compliance with Ministerial Order 706 is maintained. Refer to [Annual Anaphylaxis Risk Management Checklist for Schools](#).

8. Register of students at risk of anaphylactic reactions

The Principal nominates the Office Manager to maintain an up-to-date register of students at risk of anaphylactic reaction. This information is to be shared with all staff and accessible to all staff in an emergency.

- The information that is recorded in the students with anaphylaxis register will be the students name, class, known allergen, symptoms, treatment, students ASCIA plan and medication storage and contact details..
- The register is located in the first aid room, in the first aid bags in each classroom, in the student file on the schools management system.
- The office manager is responsible for maintaining and updating the register.

9. Location, storage and accessibility of autoinjectors

It is the responsibility of the Principal to purchase auto-injectors for the school for general use and to ensure they are replaced at time of use or expiry; whichever is first. (Expiry date period is usually within 12–18 months). General use auto-injectors are used as a back-up to auto-injectors that are provided for individual students by the Parent in case there is a need for an auto-injector for another student who has not previously been diagnosed at risk of anaphylaxis.

Schools should consider the following when identifying the minimum autoinjectors required, considering:

- the number of students enrolled at the school who have been diagnosed as being at risk of anaphylaxis
- the accessibility of autoinjectors (and the type) that have been provided by the Parent
- the number of locations at the school, including in the school yard
- the number and types of excursions, camps and special events conducted, organised or attended by the school
- the expiry date period of autoinjectors brands. usually expire within 12–18 months
- Schools should consider the type of autoinjector, considering:
- the available brands in Australia (EpiPen®, EpiPen Jr®, Anapen 500®, Anapen 300® and Anapen Jr®)- Refer to this procedure for further information
- the types used for broad use in emergency situations
- the brands that are widely accessible and do not require a prescription.

Nazareth Catholic Primary School provides EpiPen® auto-injector to purchase for general use.

The auto-injectors are to be stored in the first aid room and in the first aid bags.

- Adrenaline autoinjector devices be stored in a cool dark place at room temperature, which they define as between 15 and 25 degrees Celsius.
- If these temperatures cannot be maintained, ASCIA recommends storing the device in an insulated wallet

School anaphylaxis supervisors are responsible for informing school staff of the location for use in the event of an emergency.

10. When to use an auto-injector for general use

The Principal ensures that auto-injectors for general use will be used under the following circumstances:

- a student's prescribed auto-injector does not work, is misplaced, misfires, has accidentally been discharged, is out of date or has already been used
- a student previously diagnosed with a mild or moderate allergy who was not prescribed an adrenaline injector has their first episode of anaphylaxis

- when instructed by a medical officer after calling 000
- first time reaction to be treated with adrenaline before calling.

10.1. *Note: if in doubt, give student auto-injector as per ASCIA Action Plans. Please review [ASCIA First Aid Plan for Anaphylaxis \(ORANGE\)](#) and [ASCIA Adrenaline \(Epinephrine\) Injectors for General Use](#) for further information.*

11. Emergency response to anaphylactic reaction

In an emergency anaphylaxis situation, the student's ASCIA Action Plan, the school's general first aid procedures, Danger □ Response □ Send for Help □ Airway □ Breathing □ CPR □ Defibrillation (DRSABCD), the emergency response procedures in this policy and [ASCIA First Aid Plan for Anaphylaxis](#) must be followed.

The Principal must ensure that when a student at risk of an anaphylactic reaction is under the care or supervision of the school outside normal class activities, such as in the school yard, on camps or excursions or at special events conducted, organised or attended by the school, there are sufficient staff present who have been trained in accordance with Ministerial Order 706.

All staff are to be familiar with the location, storage and accessibility of auto-injectors in the school, including those for general use.

The Principal must determine how appropriate communication with school staff, students and the Parent is to occur in the event of an emergency about anaphylaxis.

Copies of the [ASCIA First Aid Plan for Anaphylaxis](#) and emergency procedures are prominently displayed in the relevant places in the school, for example, first aid room, classrooms and in/around other school facilities. Refer to [Emergency Response to Anaphylactic Reaction](#) template..

- A complete and up-to-date list of students identified at risk of anaphylaxis is located in the first aid room and on the school bi-annual anaphylaxis briefing document
- Details of IAMPs and ASCIA action plans are located in the first aid room and in the first aid bags in each classroom. The bags containing spare EpiPens are taken for all activities (including off-site), camps, excursions and special events.
- Autoinjectors, including those for general use are stored at the correct temperature in the first aid room and in the first aid bags.
- Records of incidents, injuries and first aid treatment are documented. First aid records are retained within the school and in line with MACS policies for information recordkeeping, retention and disposal.

Refer to [Emergency Response to Anaphylactic Reaction](#).

12. Staff training

In compliance with Ministerial Order 706, it is recommended that all Victorian school staff undertake one of two accredited training options.

The Principal requires all staff to participate in training to manage an anaphylaxis incident. The training should take place as soon as practicable after a student at risk of anaphylaxis enrolls and, where possible, before the student's first day at school.

Staff undertake training to manage an anaphylaxis incident if they:

- conduct classes attended by students with a medical condition related to allergy and the potential for anaphylactic reaction
- are specifically identified and requested to do so by the Principal based on the Principal's assessment of the risk of anaphylactic reaction occurring while a student is under that staff member's care, authority or supervision.

Our school considers, where appropriate, whether casual relief teachers and volunteers should also undertake training.

Our school staff are to:

- successfully complete an approved anaphylaxis management training course in compliance with Ministerial Order 706
- participate in the school's twice yearly briefings conducted by the school's anaphylaxis supervisor or another person nominated by the Principal, who has successfully completed an approved anaphylaxis management training program in the past two years.

A range of training programs are available, and the Principal determines an appropriate anaphylaxis training strategy and implements this for staff. The Principal ensures that staff are adequately trained and that enough staff are trained in the management of anaphylaxis noting that this may change from time to time dependent on the number of students with IAMPs.

School staff undertake face-to-face training 22578VIC Course in First Aid Management of Anaphylaxis. Accredited for three years.

The school notes that 22578VIC Course in First Aid Management of Anaphylaxis is a face-to-face course that complies with the training requirements outlined in Ministerial Order 706. School staff who have completed this course will have met the anaphylaxis training requirements for the documented period.

The school Anaphylaxis Supervisor will have completed 22579VIC Course in Verifying the Correct Use of Adrenaline Injector Devices – at no cost for Victorian Catholic schools at the [Hero HQ School Booking Portal](#) or email Hero HQ for more information: schools@herohq.com. Training in this course is current for three years.

Anaphylaxis Supervisors

Anaphylaxis supervisors play a key role in undertaking competency checks on all staff who have successfully completed the ASCIA online training course. To qualify as a school anaphylaxis supervisor, the nominated staff members need to complete an accredited short course that teaches them how to conduct a competency check on those who have completed the online training course e.g., 22579VIC Course in Verifying the Correct Use of Adrenaline Injector Devices.

The Principal is to identify two staff per school or for each campus to become school anaphylaxis supervisors.

The school's anaphylaxis supervisors are : Reuben Johnson (Principal) and Marelle Wrigley, Deputy Principal

On 1 September 2021, the Anapen adrenaline (epinephrine) auto-injector was introduced into Australia for the treatment of anaphylaxis. Schools will need to ensure relevant staff are trained to use them.

Anaphylaxis supervisors should participate in the Anapen workshop if their school has an enrolled student with an [ASCIA Action Plan for Anaphylaxis Red Anapen](#).

Twice yearly staff briefing

The Principal ensures that twice yearly anaphylaxis management briefings are conducted, with one briefing held at the start of the year. The briefing is to be conducted by the school anaphylaxis supervisor or another staff member who has successfully completed an Anaphylaxis Management Course in the previous two years. The school use the Anaphylaxis Management Briefing Template provided by DE for use in Victorian schools. A facilitator guide and presentation for briefings created by DE is available in the resources section of the procedures.

The briefing includes information about the following:

- the school's legal requirements as outlined in Ministerial Order 706
- the school's anaphylaxis management policy
- causes, signs and symptoms of anaphylaxis and its treatment

- names and pictures of students at risk of anaphylaxis, details of their year level, allergens, medical condition and risk management plans including location of their medication
- relevant anaphylaxis training
- ASCIA Action Plan for Anaphylaxis and how to use an autoinjector, including practising with a trainer autoinjector
- the school's general first aid and emergency responses
- location of and access to auto-injectors that have been provided by the Parent or purchased by the school for general use.

All school staff should be briefed on a regular basis about anaphylaxis and the school's anaphylaxis management policy.

- It is expected that all staff at Nazareth Catholic Primary School be briefed twice a year about the students with anaphylaxis. This will be presented during a staff meeting at the start of the school year and during semester two. School staff will also be required to undertake a face-to-face training Course in First Aid Management of Anaphylaxis 22578VIC.
- The Anaphylaxis supervisor and the office manager will be responsible for maintaining staff training records.
- The Anaphylaxis supervisor's at Nazareth Catholic Primary School are Reuben Johnson (Principal) and Marcelle Wrigley (Deputy Principal.)

13. Anaphylaxis communication plan

The Principal is responsible for ensuring that a communication plan is developed to provide information to all school staff, students and their Parent about anaphylaxis and the school's anaphylaxis management policy.

This communication plan will include strategies and practices for communicating with school staff, students and parents/guardians/carers. The communication plan will be made available on the schools website and in the schools policy library.

Practices within the school include:

- Raising staff awareness – arrangements for twice yearly briefing, regular briefings, induction of new staff, CRT staff, etc.
- Raising student awareness – Use of fact sheets, posters with messages about anaphylaxis, peer support, etc.
- Working with parents – developing open, cooperative relationships with parents/guardians/carers, The school will request that parents provide up-to-date and accurate medical information relating to students, including information about conditions such as anaphylaxis, asthma and diabetes. Parents will be requested to provide this information annually, prior to camps and excursions and if the child's medical condition has changed.
- Methods for raising school community awareness – Parents are regularly reminded to update their child's medical information via the schools newsletter, email/SMS, facebook and the parent portal.

This communication plan includes strategies for advising school staff, students and their Parent about how to respond to an anaphylaxis reaction of a student in various environments:

- during normal school activities, including in a classroom, in the school yard, in all school buildings and sites including gymnasiums and halls
- during off-site or out of school activities, including on excursions, school camps and at special events conducted, organised or attended by the school.

The Communication Plan includes procedures to inform volunteers and casual relief staff of students who are at risk of anaphylaxis and of their role in responding to an anaphylactic reaction experienced by a student in their care.

The Principal and their nominee work with the Parent to support the student's needs. The Principal develops a communication process for when new or updated medical documentation and/or medication is required as part of the annual or triggered reviews. The school staff engaged in this process are to make communication accessible and culturally appropriate.

The Principal ensures that the school staff are adequately trained by completing an approved training course:

- 22579VIC Course in First Aid Management of Anaphylaxis every three years AND
- provision of an in-house briefing for school staff at least twice per calendar year in accordance with Ministerial Order 706, with one briefing at the commencement of the school year.

The policy is publicly available and published on the school's website.

14. Definitions

Definitions of standard terms used in this Policy can be found in the [Glossary of Terms](#).

Anaphylaxis

Anaphylaxis is a severe, rapidly progressive allergic reaction that is potentially life threatening. The most common allergens in school aged children are peanuts, eggs, tree nuts (e.g., cashews), cow's milk, fish and shellfish, wheat, soy, sesame, lupin and certain insect stings (particularly bee stings).

Anaphylaxis Guidelines (Guidelines)

A resource for managing severe allergies in Victorian schools, published by the Department of Education (DE) for use by all schools in Victoria and updated from time to time.

Australasian Society of Clinical Immunology and Allergy (ASCI)

The peak professional body of clinical immunology and allergy in Australia and New Zealand.

Autoinjector

An adrenaline autoinjector device, approved for use by the Australian Government Therapeutic Goods Administration, which can be used to administer a single pre-measured dose of adrenaline to those experiencing a severe allergic reaction (anaphylaxis).

Ministerial Order 706

Ministerial Order 706: Anaphylaxis Management in Victorian Schools which outlines legislated requirements for schools and key inclusions for their Anaphylaxis Management Policy.
